# DETAILED ACTION

The response filed December 8, 2008 have been received and entered into the application.

## REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The response filed December 8, 2008 is persuasive to place the application in conditions for allowance.

The cited prior art, Carling et al. teach that the combination of formoterol and budesonide in a single formulation useful for the treatment of asthma. Given the Watson et al's of record, teaching away by showing that, consistent with previous studies with budesonide in COPD, a relatively high dose of inhaled budesonide did not improve lung function in airflow obstruction, one of ordinary skill in the art would not be motivated to employ the combination for the treatment of COPD.

The cited prior art, Robert et al. teach that bronchodilators and inhaled steroids, as anti-asthma drugs, alone or together were prescribed to patient with asthma, COPD and bronchitis. However, Robert et al. do not teach that the combinations with formoterol would result in surprising unexpected results as shown by Applicants (see Trofast Declaration illustrated data 2005). Moreover, the Watson et al. teaches away in the art by showing that, consistent with previous studies with budesonide in COPD, a

Application/Control Number: 10/010,283

Art Unit: 1617

relatively high dose of inhaled budesonide did not improve lung function in airflow obstruction.

The information Disclosure Statement filed December 8, 2008 and September 15, 2008 have been considered. The references alone or in combination form do not teach nor suggest the method as those instantly claimed.

Therefore, the claims are allowable over the cited prior art because the prior art does not teach, disclose nor make obvious the claimed method for reducing the frequency and/or intensity of chronic obstructive pulmonary disease (COPD) exacerbations experienced by a patient suffering from COPD, which method comprises administering to the patient via inhalation (i) a first active ingredient which is formoterol, a pharmaceutically acceptable salt or solvate thereof, or a solvate of such a salt; and (ii) a second active ingredient which is budesonide, wherein the method is effective to reduce the frequency and/or intensity of exacerbations in the patient, the first and second active ingredients are administered simultaneously, and the molar ratio of (a) formoterol in the first active ingredient to (b) the second active ingredient is from 1:555 to 2:1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
